

Coding & Solution

Date	28 June 2026
Team ID	-
Project Name	EduGenie – AI-Powered Educational Assistant
Maximum Marks	5 Marks

Coding & Solution

This section evaluates the quality and completeness of your implemented code and the overall solution. Your submission should demonstrate working functionality, clean code practices, and alignment with your defined requirements.

Instructions:

1. Ensure your code is well-structured, commented, and follows best practices for your chosen technology stack.
2. The solution should address the core problem statement and implement the key functional requirements.
3. Include all source files, configuration files, and setup instructions needed to run the application.
4. Attach or link to your code repository (e.g., GitHub) in the table below.

Solution Summary

Field	Details
Repository Link / URL	https://github.com/terish5676/EduGenie
Programming Language(s)	Python (backend), JavaScript ES6, HTML5, CSS3 (frontend)
Framework(s) Used	Fast API, Motor (MongoDB async driver), Pydantic
Key Features Implemented	JWT authentication; AI Q&A, Explain, Quiz, summarize (text & file), Roadmap; Smart Notes with folders; Bookmarks; AI History; Progress dashboard (streaks, focus score, quiz scores); Settings (theme, AI model, notifications, weekly goal).
Pending / Incomplete Features	Voice-based AI tutor, AI flashcards, collaborative notes, and mobile app.

Setup / Run Instructions	1) pip install -r requirements.txt 2) copy .env.example to .env and set MONGODB_URI, GEMINI_API_KEY, JWT_SECRET_KEY 3) uvicorn backend.main:app --reload --host 0.0.0.0 --port 8000 4) open http://localhost:8000
---------------------------------	---

Code Quality Checklist

S.N o	Criteria	Status (Yes / No)
1	Code is modular and organized into functions / classes	Yes
2	Meaningful variable and function names are used	Yes
3	Code includes comments / documentation where necessary	Yes
4	Error handling is implemented for critical operations	Yes
5	The application runs without critical errors	Yes
6	Code is committed to a version control repository	Yes

Additional Notes / Comments:

The solution follows a modular architecture using Fast API routers, services, middleware, and utility modules. Authentication is implemented using JWT, data is securely stored in MongoDB Atlas, and Google Gemini API powers all AI functionalities. The project adheres to clean coding practices, reusable components, proper error handling, and version control using GitHub.
